Period for Reply -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1, uses the pronoun "it". It is unclear what "it" refers to, applicant should specify which part of the device is being recited within the claim.

Regarding claim 2, "in the form of spherical caps" is indefinite because the scope of what is considered a "form" of a "spherical cap" cannot be determined. A spherical cap can take any one of an infinite number of forms.

Regarding claim 3, it is unclear what the scope of "close to being hemispheres" is because there is no basis for how close "close" is, and because of the indefiniteness imparted by scope and meaning of "spherical caps".

Regarding claim 4, there is no antecedent basis for "the centers".

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1–4 are rejected under 35 U.S.C. 102(b) as being anticipated by Jeanroy (US Patent 6,474,161).

Jeanroy discloses a resonator comprising a shell (14) having a pole (top of shell) held by a support rod (12), the shell having an annular edge (the bottom, horizontal surface of the shell) defined by an inside surface and an outside surface (see fig 5) that are geometrically similar and that extend around a common axis of revolution (along 12), wherein the inside surface and the outside surface are offset relative to each other along the axis of revolution in such a manner that the shell presents a thickness along the annular edge that is greater than the thickness that it presents in the vicinity of the pole (as shown in figure 5, the width of the lower portion of the shell is larger than the width of the shell at the pole).

Regarding claim 2, the inside and outside surface are in the form of spherical caps.

Regarding claim 3, the spherical caps are close to being hemispheres.

Regarding claim 4, the centers of the inside and outside surfaces of the shell extend on either side of a plane containing the annular edge.
